## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-2, 4-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Smith, US.

Pat. No. 6,055,592.

3. Claim 1, Smith teaches a method for controlling a pointing device connected to a computer main body [*title, abstract*], the method comprising:

producing an operation signal every time said pointing device is operated [*col. 3, lines 32-36*];

producing a compatibility function signal for said pointing device in response to the operation signal [*signal representing the pointing device position data, col. 3, lines 33-34*];

changing said operation signal into an additional function signal [*signal representing the card codes which are encoded as pointing device codes, col. 3, lines 35-36*];

monitoring a protocol selector signal derived from said computer main body [*col. 3, lines 32-36, 42-48*]; and

supplying at least one of said compatibility function signal and said additional function signal to said computer main body, said additional function signal being supplied to said

computer main body when said protocol selector signal identifies that said additional function signal is to be supplied [*col. 3, lines 32-36, 42-48*].

4. Claim 2, Smith teaches the step of changing said operation signal into said additional function signal includes receiving a command-data signal from said computer main body and analyzing said command-data signal for a command and data within said received command-data signal [*col. 3, lines 32-36, 42-48*].

5. Claim 4, Smith teaches said pointing device is a mouse and said additional function signal contains a mouse data signal, a mouse clock signal, and a CPU data signal [*abstract, Figs. 1, 2 and 7*].

6. Claim 5, Smith teaches said protocol selector signal is monitored immediately after a power supply of said computer main body is turned on [*inherently, the selector signal is monitored immediately after the computer main body is turned on*].

***Allowable Subject Matter***

7. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
